Day-to-Day Experiences

Instructions: Below is a collection of statements about your everyday experience. Using the 1-6 scale below, please indicate how frequently or infrequently you currently have each experience. Please answer according to what *really reflects* your experience rather than what you think your experience should be. Please treat each item separately from every other item.

	1 Almost Always	2 Very Frequently	3 Somewhat Frequently	4 Somewhat Infrequently	5 Very Infrequently	6 Almost Never
I could be experiencing some emotion and not be conscious of it until some time later.	1	2	3	4	5	6
I break or spill things because of carelessness, not paying attention, or thinking of something else.	1	2	3	4	5	6
I find it difficult to stay focused on what's happening in the present.	1	2	3	4	5	6
I tend to walk quickly to get where I'm going without paying attention to what I experience along the way.	1	2	3	4	5	6
I tend not to notice feelings of physical tension or discomfort until they really grab my attention.	1	2	3	4	5	6
I forget a person's name almost as soon as I've been told it for the first time.	1	2	3	4	5	6
It seems I am "running on automatic," without much awareness of what I'm doing.	1	2	3	4	5	6
I rush through activities without being really attentive to them.	1	2	3	4	5	6
I get so focused on the goal I want to achieve that I lose touch with what I'm doing right now to get there.	1	2	3	4	5	6
I do jobs or tasks automatically, without being aware of what I'm doing.	1	2	3	4	5	6
I find myself listening to someone with one ear, doing something else at the same time.	1	2	3	4	5	6

Study title: Exploring determinants of food taste perception
Ethics approval number: 0281

Information about the study:

Eating behaviour is an interesting topic in psychological research. We know that there are large individual differences in food choices that people make, and the existing literature had linked these differences to genetics, exposure, lifestyle factors, and mental health variables. We are all born with preferences for sweet and higher-calorie foods, and we quickly learn to like salty tastes, whereas learning to like bitter and sour tastes depends on our diet in childhood and adulthood, and many other factors that influence our choices in general. The present study is a pilot exploring perceptions of taste, texture, and overall pleasantness of different foods, because we want to learn more about how and why people's ratings of tastes may differ.

Why have I been asked to take part?

You are being recruited to take part in this study because your answers will help us to identify the role that psychological variables may play in taste perception.

What does the study involve?

You will be asked to come to the lab twice, on two consecutive weeks. We will ask you not to eat for two hours beforehand. We will present you with five different foods to taste and rate. All test foods are plant based. You will be asked to complete some self-report questionnaires that look into your sensitivity to sensory stimulation and habitual eating patterns (including disordered eating), mental health, and mindfulness. We will also ask you to recall some events that have emotional significance for you (but not to share details of these events).

Each session will take no more than an hour to complete. This allows for: (1) welcoming you to the lab (2) reading the participant information sheet and asking any questions, (3) obtaining informed consent, (4) administering the foods to taste and ratings / questionnaires to complete online; and (5) debriefing and answering any questions.

Are there any benefits or risks?

Appendix 5 study information sheet continued

Although the research does not offer any direct personal benefit to you from participating, you will be providing useful information that can be used to build better research procedures and theoretical models.

No personal risks are associated with this research, but some of the questions (items) are of a sensitive nature. We are really grateful for your participation, but you should remember that you are free not to answer specific questions or items on a questionnaire, if you so wish, and that you can terminate your participation at any time without penalty. If you experience negative affect after taking part in this study, please speak to the principal investigator immediately, and they can point you to contact the appropriate service provider (e.g., Bangor University Student Counselling Service).

What will happen to my data?

All data collected will remain private, anonymous and confidential, and you will not be identifiable in any report, thesis, or publication which arises from this study. The data from this study will be stored securely for 5 years. All electronic data will be anonymised. Consent forms will be stored separately from completed surveys (administered via Qualtrics, online).

If you choose to withdraw from the study whilst you are participating, you have the right to request that your data are destroyed. If you want to withdraw your data after participating, please inform the Principal Investigator (PI) who will then delete your data.

What if I don't want to take part?

It is up to you to decide whether or not you would like to participate in this study. Deciding not to take part will not impact any other aspect of your studies.

Who do I contact about the study?

Dr Mihela Erjavec (m.erjavec@bangor.ac.uk)

Who do I contact with any concerns about this study?

In the unlikely case of any complaints concerning the conduct of this research, these should be addressed to: Colin Ridyard, Bangor University senior research governance and policy officer, c.ridyard@bangor.ac.uk

Study title: **Exploring determinants of food taste perception**
Ethics approval number: 0281

I, _____, hereby agree to participate in a scientific study supervised by Dr Mihela Erjavec. The study and my part in the study have been fully explained to me and I understand this explanation. I will be asked to complete some questions regarding my sensory sensitivity, mental health, and eating behaviours. I will be asked to rate tastes, texture, and pleasantness of some foods. I will be asked to recall some emotionally significant events. The procedures of this study and their risks have been answered to my satisfaction. *Participant's initials:* _____

I understand that I am free not to try some foods offered to me for tasting, and not to answer specific questions or items on questionnaires. *Participant's initials:* _____

I understand that all data will remain anonymous and confidential with regard to my identity. *Participant's initials:* _____

I understand that I am free to withdraw my consent and terminate my participation at any time without penalty. *Participant's initials:* _____

I understand that I may request a summary of the results of this study. *Participant's initials:* _____

Date Participant's Signature

I, the undersigned, have fully explained the investigation to the above individual.

Date Experimenter's Signature

Principal Investigator's contact details: Dr Mihela Erjavec (m.erjavec@bangor.ac.uk). Please feel free to get in touch with any questions.

Interim Debriefing Sheet

Study title: **Exploring determinants of food taste perception.**

Thank you for completing the first part of the study. We look forward to seeing you again in a week's time. Please remember to keep your appointment and let the experimenters know if this needs to be altered.

If you have any personal concerns after completing the first part of the study, please get in touch with Dr Mihela Erjavec (m.erjavec@bangor.ac.uk)

If you are concerned about your eating behaviour or mental health:

- (1) Please speak to your Doctor (GP).
- (2) Please speak to your personal tutor at the university.
- (3) Please speak to Student Counselling Services on 01248 388520 (call for an appointment).

Participant Debriefing Sheet

Study title: Exploring determinants of food taste perception.

The existing research indicates that there are large individual differences in people's food choices and habits. However, less is known about how different psychological variables may influence the way in which we perceive the taste of foods.

In the present study, we were interested in establishing how taste profiles, indicated by the strengths of basic tastes that the participants perceive when tasting different foods, may differ between people – ~~and also~~ whether they may differ for the same individual at different times.

Based on what is known, we hypothesised that individuals' taste may be influenced by their overall sensitivity to sensory stimuli and mindfulness – for example, some people may detect bitterness or sweetness in foods whereas others do not.

We also investigated whether mood may influence tasting. In one of the sessions, we asked you to recall a happy event, and in the other an unhappy memory, which was expected to subtly alter your present mood state. Did the taste of foods change? For example, do foods taste sweeter when you are in a better mood? At the end of the study, we asked for your experiences of any such changes, based on self-observation.

Finally, we know that higher levels of depression, anxiety, and disordered eating can alter food preferences, and were interested to learn whether the same was true of tastes.

Study Concerns and Additional Contact Information
If you have any personal concerns after completing the study, please get in touch with Dr Mihela Erjavec (m.erjavec@bangor.ac.uk)

Appendix 28 positive condition qualtrics survey in Word format

PROJECT 2024 Test 1 Positive

Start of Block: Demographics

Q1 Please write your student number here (starting with 500...)

Q2 Today's date and time

Q3 Your age (in years)

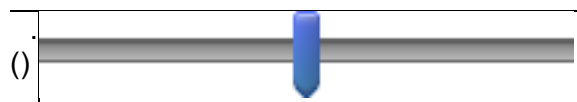

Q4 Your gender

- ☐ Female (1)
- ☐ Male (2)
- ☐ Non-binary / third gender (3)
- ☐ Prefer not to say (4)

Q5 How many hours since your last meal or snack?

Hunger P Please use the slider to indicate how hungry you are right now.

Not at Very
all hungry
hungry

CQ1 Have you had Covid in the past month?

- ☐ Yes (1)
- ☐ No (2)

CQ2 Has your sense of taste been affected?

- ☐ Yes I lost much of my taste, it is still not right (1)
- ☐ It was affected but it is back to normal (2)
- ☐ It was not affected (3)

Baseline mood P Thinking about the previous week, how have you been feeling most of the time?

Very Average Very
bad mood good
mood mood

End of Block: Demographics

Start of Block: Sensory processing sensitivity

Sensory processing sensitivity This part of the survey will present you with questions about your usual responses to the environment. There are no right or wrong answers. People show a wide range of individual differences in their reactivity, flexibility, sensitivity, and responsiveness.

SPS Please answer each question according to the way you personally feel.

	Not at all (1)	(2)	(3)	Moderately (4)	(5)	(6)	Extremely (7)
Do you seem to be aware of the subtleties in your environment? (1)							
Are you easily overwhelmed by things like bright lights, strong smells, coarse							

fabrics,
or
sirens
close
by?
(2)

Do you
have a
rich,
complex
inner
life?
(3)

Do you
get
rattled
when
you
have a
lot to
do in a
short
amount
of
time?
(4)

Are
you
deeply
moved
by the
arts or
music?
(5)

Are
you
annoyed
when
people
try to
get
you to
do too
many
things
at
once?
(6)

Do you
make
a point
to
avoid
violent

movies
and TV
shows
? (7)
Do you
find it
unplea
sant to
have a
lot
going
on at
once?
(8)
Do
chang
es in
your
life
shake
you
up?
(9)
Do you
notice
and
enjoy
delicat
e or
fine
scents,
tastes,
sounds
, works
of art?
(10)
Are
you
bother
ed by
intense
stimuli,
like
loud
noises
or
chaotic
scenes
? (11)
When
you
must
compe
te or
be

observed while performing a task, do you become so nervous or shaky that you do much worse than you would otherwise?
(12)

End of Block: Sensory processing sensitivity

Start of Block: Mindfulness

MAAS Below is a collection of statements about your everyday experience. Using the 1-6 scale below, please indicate how frequently or infrequently you currently have each experience. Please answer according to what REALLY REFLECTS your experience rather than what you think your experience should be. Please treat each item separately from every other item.

	Almost Always (1)	Very Frequently (2)	Somewhat Frequently (3)	Somewhat Infrequently (5)	Very Infrequently (6)	Almost Never (7)
I could be experiencing some emotion and not be conscious of it until some time later. (1)						
I break or spill things because						

e of
careless
ness,
not
paying
attentio
n, or
thinking
of
somethi
ng else.

(2)

I find it
hard to
stay
focused
on

End of Block: Mindfulness

Start of Block: Mood induction P

Emotion / mood In this part of the survey, we will ask you to consider your emotional experiences in as much detail as you can. There are no right or wrong ways in which you can do this, but please do not rush through the questions.

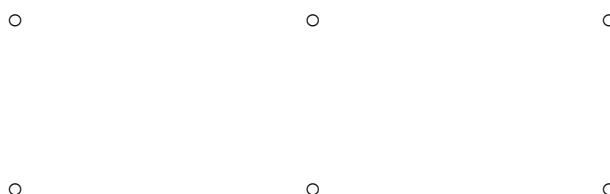

E1 Please recall an event from the past month that really lifted your mood. Try to recall as many details of this event as you can, and how it made you feel. You do not need to describe this event for us. However, please tell us about the feelings that you experienced in the box below. For example, you may have felt happy, jubilant, playful, contented, loved... Please write at least five feelings that you've had at the time - the more the better.

E2 Please think about things or events that usually help you to feel good. Write down at least five of these - the more the better.

E3 Please rate the following statements as they apply to you.

	Not at all true of me (1)	Sometimes (2)	Very often true of me (3)
I experience emotions strongly. (1)	☐	☐	☐

My moods
vary
widely.
(2)
I am easily
swayed by
my moods
and
feelings.

Q0A You will now be presented with four samples of different foods, labeled Food 1, Food 2, Food 3, Food 4, and Food 5. All foods are plant based. Please taste each sample carefully, allowing the taste to develop in your mouth, before answering the questions relating to the food. You can eat all of it, or just take a small bite, or even spit it out if you don't like it. Please answer the questions before moving onto the next food.
